## Thermoformed precision packaging and technical components

Vitalo Packaging specializes in the development of high-end thermoformed precision packaging and thermoformed technical components for the electronics industry. Vitalo Packaging integrates in-house design, tooling and production know-how with a flexible, customer driven approach.

Vitalo Packaging exploits its in-house technical expertise and know-how by fully integrating all its processes. From development and prototyping through to tool making and thermoforming, Vitalo Packaging tailors each solution to the customer's individual technical and commercial needs.

Vitalo Packaging specializes in the development and thermoforming of high quality and precision packaging. With our innovative technology Vitalo Packaging is able to offer packaging solutions that meet every customer's ESD, heat resistance or chemical resistance requirements, combined with precision, low cost and mass volume production.

Vitalo Packaging excels in the business of thin wall plastic components and the forming and punching of high-end technical components for materials such as Polyetherimide, UV resistance Polycarbonate and Polyphyneloxide as well as for hybrid materials such as Polyetherimide with metal coating, all combined with inkjet traceability code.

**Vitalo Packaging offers fully-integrated customer service from development to production for:**

- » Technical & consumer packaging
- » Technical trays
- » Carrier tapes
- » Fragility packaging
- » Components

### **In-house design, prototyping and tooling**

Vitalo Packaging's toolshop combines skilled engineering with the latest high tech know-how to produce thermoforming tools in several materials that meet all the necessary precision and technical features. Our own prototyping and development division works with the most recent CAD systems and CAD/CAM facilities to guarantee the quick and efficient development of your new product.

### **Production facilities**

Vitalo Packaging continuously upgrades its production capabilities by innovating and building its own equipment to offer the best levels of performance and products at any given point in time. With its constant investment in Research and Development, Vitalo Packaging ensures the highest quality of thermoforming and punching processes for our client's products.
