Equipment

Plastic for high-tech products

Vitalo Industries is a leading solutions provider, supplying high-end quality products for business-to-business machinery applications.

Vitalo Industries specializes in the **development and production of thermoformed parts and components** for top-tier customers throughout various high-tech industries. These products include housing for high-end medical equipment, covers for the printing industry, weighing equipment and total housing for all kinds of applications.

Vitalo Industries has established **partnerships** with a large array of **international customers** and is known in the industry for its **profound customer care**.

All Vitalo Industries' customers demand the **highest level of excellence** for products that require **perfection in design, minute detail and easy assembly**.

Various techniques are used in order to generate **the best possible solution** for each product with an **optimal critical investment**.

- » High-end housings
- » High pressure forming with textured tools for paintless solutions
- » Reduction of assembly times through innovative design

Negative thermoforming is used to obtain optimal quality features on the outside surface for high end housing, using 5-axis CNC milling robots to finish products with **optimal precision**.

High pressure forming in combination with **textured tools** provides solutions for products in industries where painting is not allowed and components need to match existing parts. This process ensures **injection-mold quality for a perfect fit and finish** during the final machine assembly.

Vitalo Industries manages to find solutions that exceed its clients' expectations, creating **original designs** that considerably **reduce mounting and assembly times**.

Looking for a total cost-saving solution?
Vitalo Industries is more than happy to help you.
